Agenda

- Functional - Why?
- Some Basics
- The Practical Side

Functional - Why?

- It's a more *compact and flexible* technique (than OO) to achieve *modularization and encapsulation*
- It suits certain *execution models* perfectly (think request-based services)
- Functional principles result in *very stable code* that is *extremely easy to test*
- Writing code in functions helps focus on what happens - instead of focusing on data and structural modeling
